

RAMD **83987** GAF Materials Earl Jones 07/31/01

Permit # 7711A RNEW **75805** (PAR received 9/28/2000) was reviewed and there were emissions that were not represented. These emissions required an amendment before 7711A could be renewed. RENEW Public Notice #1 on 11/9/2000. This amendment is the above referenced RAMD **83987** (PAR received 7/31/2001) with Public Notice on 7/4/2002. Also during this RNEW review process GAF applied for a VERP **82846** which PAR received on 4/23/2001. Since there was difficulty in separating the RENEW, RAMD, and the VERP processes the company withdrew the VERP and included those facilities in the RAMD. GAF did not think they had Public Notice significant emissions in the RAMD and elected to test. We asked that they test for both PM and VOC. The resulting additional allowable emissions are VOC = 24.53 tpy and PM₁₀ = 43.82 tpy. This plant is not major. The draft permit is agreed upon, public notices are complete, and the single request for hearing for the renewal has been withdrawn. The Tech Review is in process, and final letters are in process. The RTC is in process.
